

WEB DEVELOPER

Our client is looking for a Web Developer to develop websites, web applications and apps for today's browsers and devices. They are an all-digital agency, building a lot of websites and tools for great companies. They are growing and need more talented people on their team.

- This is a team environment, where you've got to know your stuff, enjoy learning new things, and be able to teach us a thing or two.
- We prefer collaboration over fancy job titles and know that a good idea can come from anyone—whether it's the intern or the senior partner. If you love hierarchy and rigid processes, this is not the place for you.
- Our coders don't sit in a musty back room. They're front and center, advocating for their work, talking to clients, and engaging with the team.
- Because we want great results for our clients, we invest heavily in in-house developers with the technical expertise to create reliable, websites and apps that work seamlessly on any device. In other words, we really value our developers.

What you'll do:

- Work hand-in-hand with designers to solve complicated problems and create well-crafted websites that you're proud to put your name on
- Create best-in-class digital solutions according to industry standards and coding best practices
- Find problems when no one else can
- Explain your wizardry to clients
- Defend your reasoning and demonstrate your expertise
- Great work with great people

Qualities and experience we're looking for:

- Experience with responsive web development, a variety of programming languages, CMS implementations, mobile app development, and systems integration
- Excited to work in a collaborative environment
- Willing to hustle, learn new and emerging technologies, and teach others about them
- Highly self-motivated. We don't micro-manage, and we expect everyone to manage their time well.
